

Pyxis is currently recruiting for a **Consultant - Agile Business Intelligence Developer**

Why choose Agile Business Intelligence Development?

Because the needs for business intelligence are increasing but the traditional approach to development does not work: 60% of business intelligence projects fail or are abandoned, less than 20% of decision makers actually use their BI applications, 64% of features are never or rarely used and only 20% of project costs are related to software development ...

Wouldn't you rather develop your skills and have fun on projects that will be successful?

Agile Business Intelligence allows you to:

- Satisfy customers quickly with useful software,
- Increase the quality of the software delivered,
- Cope with complexity,
- Reduce inefficiencies,
- Avoid long periods of stabilization at the end of the project,
- Maximize collaboration,
- Increase motivation and commitment of individuals and
- Have fun at work.

Pyxis helps software development companies to become places where **results, quality of life, and fun** coexist sustainably by being first and foremost an example of what it proposes to its clients and by coaching them.

Your responsibilities

Based on the Agile principles and using the SCRUM approach you will be responsible for:

- The design, development and delivery of business intelligence projects using an iterative and incremental approach.
- The use of Agile engineering practices to produce components of high quality.
- The analysis of customer needs and the effective development of solutions that ensure the profitability of the project and customer satisfaction.
- Identifying the indicators needed for decision making and identifying data sources to support them.
- The development of the extraction-transformation-loading (ETL) cycle to build the underlying data warehouse.
- Modeling multidimensional cubes based on the various data sources.
- Collaboration with all team members in the evolution of the solution.

- The creation and implementation of key performance indicators and reports, scorecards and dashboards.

Your qualifications

- 5 years experience in business intelligence development projects with tools from the Microsoft BI platform (SSIS, SQL Server 2005 / 2008, Analysis Services and Reporting Services).
- Knowledge of project management with Scrum and other Agile engineering practices such as XP, unit testing, Test Driven Development (TDD), continuous integration and code refactoring.
- Experience with data modeling and database design (cubes, star schema, etc.).
- Bachelor's degree in management information systems or equivalent experience.
- Fully bilingual (English and French)

In addition to a competitive salary, Pyxis offers you the opportunity to join the **Worker Shareholder Co-operative**.
